

What is Agile in SDLC?

- Agile is an adaptive and flexible software development approach.
- Emphasizes incremental development with frequent iterations.
- Involves continuous collaboration between cross-functional teams and customers.
- Focus on delivering small, functional pieces of software quickly.
- Allows for rapid response to changes in project requirements.

Agile Values

1. Individuals and Interactions over processes and tools
2. Working Software over comprehensive documentation
3. Customer Collaboration over contract negotiation
4. Responding to Change over following a plan

Agile Principles

1. Customer satisfaction through early and continuous delivery.
2. Welcome changing requirements, even late in development.
3. Deliver working software frequently (weeks, not months).
4. Collaboration between developers and business people.
5. Motivated individuals should drive projects forward.
6. Working software is the primary measure of progress.
7. Continuous attention to technical excellence and good design.
8. Simplicity—the art of maximizing work not done—is essential.
